TWICE AS GOOD

HYBRID CLEANING IN ONE CHAMBER

Simply economical:

Parts cleaning with solvents and aqueous media in only one chamber offers optimum cleaning of both organic and inorganic contamination.

For more efficiency – with the proven VAIOS and SOLVACS technologies.

Twice as good:

EMO deals with the large, Hösel with really small as well. From the smallest watch parts to voluminous components for aerospace or for large batches in the field of semi-finished products and heat treatment, with two strong partners the complete range of industrial parts cleaning covered.

Multiple success:

The VAIOS and SOLVACS hybrid technologies are in use in hundreds of machines for demanding customers throughout the world for the highest possible component cleanliness. Because "like dissolves like" is best – as double act. And naturally "Made in Germany".

We look forward to your challenge.
